## ***Version Number Description:***

3[Major version].00[Release version].00[Beta version].00[Alpha version]

### **Version 3.00.15.05**

1. Changed manual clocking, voltage, and fan controls to be viewable in Standard view.
2. Added ReadSmbusDataDll and WriteSmbusDataDll API to nTuneoem.dll

### **Version 3.00.14.05**

1. Change way the DAT file was written to ensure it's created before the tuning starts. This fixes some hangs or non-restarts when tuning.

### **Version 3.00.13.05**

1. Added code to support overclocking the PCI-E bus for systems with two PCI-E controller bridges. The bus for each controller will have the same clock adjustment made.
2. Updated Help text format
3. Changed reporting of memory size on ECC modules to exclude the memory for the ECC bits.

### **Version 3.00.12.05**

1. Initial official release
